I can wear many hats and manage multiple projects. I'm flexible and can be a leader as well as lead. I'm looking for a situation that will take my years of experience with project management, production, web development, QA and AI, and put me in a position where I can make a true impact on the bottom line.

Areas of expertise

- Digital production – overseeing assets and talent from technical design to temporal product deployment
- AI technology - automation, storyboard, QA and deployment
- Project management – from a small full-time team to outsourced talent
- Web property management – design, spec and coordinate front end assets and talent as well as oversee site maintenance and back-end programming
- Technical writing – specifications, MRD's, RFP's, budgets

Technical

- HTML5
- CSS3 positioning and page layout. Adaptive / responsive design for both email and page
- JavaScript, jQuery, AMPScript and RPL
- MJML, HTML and email coding and best practices
- Email test and preparation tools such as Litmus, Email on Acid
- ESP solutions such as SilverPop, MailChimp, YesMail, StrongView, Exact Target, Eloqua and Responsys
- Interactive publishing services such as Scene7
- Intelligent content providers such as Movable Ink and Brightcove
- Issue and Job tracking applications such as Jira, Basecamp, Sharepoint and Workfront
- Template systems such as Smarty and Freemarker
- Git, SVN, Visual Source Safe, and other source control systems
- SEO/SEM – offpage/onpage, content manipulation and Google sitemaps
- Dynamic page languages and architectures such as PHP
- MySQL and flat file databases
- Drupal, Wordpress, and other Content Management Systems
- Statistical reporting and analysis tools such as WebTrends, SiteCatalyst
- Graphics production, Photoshop
- AI tools such as n8n, Railway, Heygen, ChatGPT
- Google products such as Drive, Gmail, Sheets
